

In Sprint 2, I focused mainly on implementing the messaging system that allows buyers and sellers to communicate directly on the platform. I built the React components responsible for sending, receiving, and displaying messages between users. I also contributed by creating the “Contact Seller” button, which starts a conversation from a listing page and links the correct buyer to the seller.

One challenge I faced was making sure the messages were correctly associated with the right listing and users. At first, the data flow between components was not clear, and I had to adjust how props and state were being passed in React to fix this.

From an architecture perspective, I also contributed to updating our UML diagrams to reflect the messaging system. We had to revise the class diagram and sequence diagram to properly show how messages are created, stored, and retrieved between users. This helped the group better understand how the backend and frontend interact in the system design. Below is my commit history (Reference to my contributions of this project)

chore: update placeholder message in user object  kaybee847 committed 2 days ago ·  4 / 6	f602990		
chore: add placeholder greeting in user object  kaybee847 committed 2 days ago ·  0 / 1	351e0e4		
chore: add placeholder comment in user object  kaybee847 committed 2 days ago ·  0 / 1	c63b261		
refactor: improve message loading and enhance chat UI components  kaybee847 committed 2 days ago ·  0 / 1	db51695
