

Sprint 2 – Individual Retrospectives

(Kamogelo Mosehle)

Software Design

This week helped me grow in both technical depth and engineering maturity. I spent most of my time improving the listings experience across the stack. On the frontend, I implemented and refined dashboard search, filtering, and sorting, then improved the listing details flow by adding edit functionality for owners. A key learning for me was how quickly pages become hard to maintain when logic and UI are mixed. Refactoring into reusable hooks and smaller components made the code easier to reason about, test, and extend.

On the backend, I worked on listing routes and validation to support those UI changes. The My Listings flow surfaced important lessons around authentication and identity mapping. I initially treated profile and auth identities too similarly, which caused edge cases across environments. Debugging 401/404/500 errors taught me to design endpoint authorization more defensively and to validate assumptions with actual request/response traces instead of intuition.

I also contributed to workflow and delivery infrastructure. I set up release artifact automation and worked on Codecov integration. This part was valuable because it exposed how CI can appear correct in YAML while still failing in practice due to token scope, event context, or branch settings. I learned to think of CI as a product: observable, testable, and incremental, not just configuration.

What went well:

- I delivered features that improved user value and developer maintainability.
- I responded quickly to production-like issues and iterated based on logs.

What I want to improve:

- Add stronger automated tests for auth-protected listing paths.
- Stabilize coverage reporting end to end so CI quality signals are reliable.
- Improve pre-merge verification checklists to catch integration issues earlier.
- Fix Codecov issues, so that we can view the coverage report on Codecov.
- UI designs for messaging and listing details, UX for editing listing, creating listing, and messaging.

Overall, this week strengthened my full-stack debugging and architecture skills.

Git Commits for this week.

```
kamogelidnaFed-3 MINOWd4 ~/Documents/CMS-3/CMS300-SD/Project/campus-marketplace (update/ci-workflow)
$ git log --since="2025-04-14" --author="Kamogelobradley2008" --oneline --graph --decorate
* 8d9d903 (HEAD -> update/ci-workflow, tag: v1.1.0, origin/update/ci-workflow, main) fix: update version number to 1.1.0 in package.json
* cb97de5 (origin/feature/Listings, feature/Listings) Merge pull request #30 from Dev-astators/feature/Listings
* 626a972 feat: add token-based authentication for fetching user-specific listings
* ce3e940 Merge pull request #29 from Dev-astators/feature/Listings
* 48b2cc0 fix: Potential fix for pull request finding
* 05b118d feat: implement listing details functionality with edit actions
* b218f97 feat: enhance student dashboard with improved search and listing filters
* 5c6a387 (origin/feature/sprint1-documentation, feature/sprint1-documentation) Merge pull request #28 from Dev-astators/feature/sprint1-documentation
* 3956727 docs: Add UML diagrams and database schema for Campus Marketplace project
* 28c597c Merge branch 'main' into feature/Listings
* 8db985d Update code coverage reports and improve listing service functionality
* 3aebc19 chore: add push trigger for main branch in CI workflow
* cd47bfb chore: trigger coverage on main
* 14a2230 Merge pull request #19 from Dev-astators/update/ci-workflow
* fe807d6 Update README.md codecov batch
* ed55e5c chore: update README, added codecov batch
* 74f974e Merge pull request #18 from Dev-astators/update/ci-workflow
* 8d9d903 (HEAD -> update/ci-workflow, tag: v1.1.0, origin/update/ci-workflow, main) fix: update version number to 1.1.0 in package.json
